

Fishbone (Ishikawa) — Scaling Incident Worksheet (MVP)

Use this when the pipeline slows or fails under load. Start with evidence, then classify the bottleneck.

Problem statement (1 sentence):

e.g., "Latency spikes and throttles appear during a 10× traffic burst"

LIMITS (throttled / quota / concurrency cap)

Evidence: _____

Possible causes: _____

First safe action: _____

RESOURCES (CPU/memory per request)

Evidence: _____

Possible causes: _____

First safe action: _____

DEPENDENCIES (downstream slow / rate-limited) DATA / INPUT (payload/schema/validation)

Evidence: _____

Possible causes: _____

First safe action: _____

Evidence: _____

Possible causes: _____

First safe action: _____

Evidence summary (2 bullets): _____

Fix (one safe, reversible change): _____

Rule: If you can't point to a metric/log/event, you don't have a cause — you have a guess.
